About this document

The Medicare Code Editor (MCE) detects and reports errors in the coding claims data. This manual contains a description of each coding edit with corresponding ICD-10-CM and ICD-10-PCS code lists.

Chapter 1: Edit code lists

Below is a list of edits described in this chapter.

17. Limited coverage
18. Wrong procedure performed
19. Procedure inconsistent with LOS
20. Unspecified code

1. Invalid diagnosis or procedure code

The Medicare Code Editor checks each diagnosis including the admitting diagnosis and each procedure against a table of valid ICD codes. If an entered code does not agree with any code on the internal list, it is assumed to be invalid.

For a list of all valid ICD-10-CM and ICD-10-PCS codes, see the *International Classification of Diseases* list.

2. External causes of morbidity codes as principal diagnosis

External cause codes (V, W, X or Y codes (ICD-10-CM), E codes (ICD-9-CM)) describe the circumstance causing an injury, not the nature of the injury, and therefore should not be used as a principal diagnosis.

For a list of all external causes of morbidity codes, see the *International Classification of Diseases* list.

3. Duplicate of PDX

Whenever a secondary diagnosis is coded the same as the principal diagnosis, the secondary diagnosis is identified as a duplicate of the principal diagnosis.

4. Age conflict

The Medicare Code Editor detects inconsistencies between a patient's age and any diagnosis on the patient's record. For example, a five-year-old patient with benign prostatic hypertrophy or a 78-year-old patient coded with a delivery.

In the above cases, the diagnosis is clinically and virtually impossible in a patient of the stated age. Therefore, either the diagnosis or the age is presumed to be incorrect. There are four age categories for diagnoses in the program.

- Perinatal/Newborn. Age 0 years only; a subset of diagnoses which will only occur during the perinatal or newborn period of age 0 (e.g., tetanus neonatorum, health examination for newborn under 8 days old).
- Pediatric. Age range is 0–17 years inclusive (e.g., Reye's syndrome, routine child health exam).

- Maternity. Age range is 9–64 years inclusive (e.g., diabetes in pregnancy, antepartum pulmonary complication).
- Adult. Age range is 15–124 years inclusive (e.g., senile delirium, mature cataract).

The following pages contain lists of ICD-10-CM diagnosis codes for each of the age categories described above.

5. Sex conflict

Medicare Code Editor detects inconsistencies between a patient's sex and any diagnosis or procedure on the patient's record. For example, a male patient with cervical cancer (diagnosis) or a female patient with a prostatectomy (procedure).

In both instances, the indicated diagnosis or the procedure conflicts with the stated sex of the patient. Therefore, either the patient's diagnosis, procedure or sex is presumed to be incorrect.

The following pages contain lists of files for male and female related ICD-10-CM diagnosis and ICD-10-PCS procedure codes.

7. Non-specific principal diagnosis (discontinued as of 10/01/07)

A set of diagnosis codes, particularly those described as "not otherwise specified" (NOS), are identified by the software as non-specific. While these codes are valid ICD-10-CM codes, more precise codes should be used for the principal diagnosis. It should be noted that a diagnosis is considered non-specific only if the patient was discharged alive; patients who have died often do not receive a complete diagnostic workup, and specification of a precise principal diagnosis may not be possible.

8. Questionable admission

A. Some diagnoses are not usually sufficient justification for admission to an acute care hospital. For example, if a patient is given code R030 for elevated blood pressure reading, without diagnosis of hypertension, then the patient would have a questionable admission, since elevated blood pressure reading is not normally sufficient justification for admission to a hospital.

The following list contains diagnosis codes identified as questionable admission when used as a principal diagnosis.

Questionable obstetric admission

B. The following ICD-10-PCS procedure codes describing a cesarean section or vaginal delivery are considered to be a questionable admission except when reported with a corresponding secondary diagnosis code describing the outcome of delivery listed in Section 3.

9. Unacceptable principal diagnosis

There are selected codes that describe a circumstance which influences an individual's health status but not a current illness or injury, or codes that are not specific manifestations but may be due to an underlying cause. These codes are considered unacceptable as a principal diagnosis.

The following unacceptable principal diagnosis code is considered "acceptable" when a secondary diagnosis is also coded on the record. If no secondary diagnosis is present for this code, the message REQUIRES SECONDARY DX will appear:

Z5189 Encounter for other specified aftercare

Note: This code is identified with an asterisk.

The following pages contain a list of codes identified as unacceptable when entered as principal diagnosis.

10. Non-specific O.R. procedure (discontinued as of 10/01/07)

A set of O.R. procedure codes, particularly those described as "not otherwise specified" (NOS), are identified by the software as non-specific. While these codes are valid ICD-10-CM codes, more precise codes should be used. It should be noted that the non-specific O.R. procedure condition is reported only if all the O.R. procedures performed have been coded as non-specific; if a patient had several O.R. procedures and only one was non-specific, the edit would not be generated.

11. Non-covered procedure

There are some procedures for which Medicare does not provide reimbursement. There are also procedures that would normally not be reimbursed by Medicare but due to the presence of certain diagnoses are reimbursed.

The following pages contain lists of non-covered procedure codes and explain the circumstances in which the edit is applied.

A. Non-covered procedure codes

The procedures shown below are identified as *always* non-covered procedures.

12. Open biopsy check (discontinued as of 10/01/10)

Biopsies can be performed as open (i.e., a body cavity entered surgically), percutaneous, or endoscopic procedures. Patients are assigned to different DRGs depending on whether or not the biopsy was open. ICD-9-CM codes are explicit for open and non-open biopsies; however, the distinction made by the codes is not applied uniformly. MCE software identifies all biopsies that are coded as open biopsies, and suggests the corresponding non-open biopsy code to use, if applicable.

13. Bilateral procedure (discontinued as of ICD-10 implementation)

Certain codes do not accurately reflect procedures that are performed in one admission on two or more different bilateral joints of the lower extremities. A combination of these codes shows a bilateral procedure when, in fact, they could be procedures performed on a single joint (i.e., duplicate procedures). When two or more different joint replacement procedures are coded, this edit instructs the fiscal intermediary to make sure that these procedures were performed on two separate joints.

14. Invalid age

A patient's age may be necessary for appropriate DRG determination. If the age reported is not between 0 years and 124 years, the Medicare Code Editor will assume the age is in error.

15. Invalid sex

A patient's sex (gender) may be necessary for appropriate DRG determination. The sex code reported must be either 1 (male) or 2 (female).

16. Invalid discharge status

A patient's discharge status may be necessary for appropriate DRG determination. Discharge status must be coded according to the UB-04 conventions. Valid values are:

- 01 = Home or self-care
- 02 = Disch/trans to another short term hospital
- 03 = Disch/trans to SNF
- 04 = Disch/trans to ICF (valid until 9/30/09)

17. Limited coverage

B. Limited coverage codes (discontinued as of 04/01/2022)

The procedures shown below are identified as limited coverage procedures **when combined** with diagnosis code Z006 (Encntr for exam for nrml cmprsn and ctrl in clncl rsrch prog).

18. Wrong procedure performed

Certain external causes of morbidity codes indicate that the wrong procedure was performed.

The following list contains the codes that indicate the wrong procedure was performed.

Wrong procedure performed codes

Y6551	Performance of wrong procedure (op) on correct patient
Y6552	Perform of proc (op) on patient not scheduled for surgery
Y6553	Perform of correct procedure (op) on wrong side or body part

19. Procedure inconsistent with LOS

The following procedure code should only be coded on claims when the respiratory ventilation is provided for greater than four consecutive days during the length of stay.

5A1955Z	Respiratory Ventilation, greater than 96 consecutive hours
---------	--

20. Unspecified code

Unspecified codes exist in the ICD-10-CM classification for circumstances when documentation in the medical record does not provide the level of detail needed to support reporting a more specific code. However, in the inpatient setting, there should generally be very limited and rare circumstances for which the laterality (right, left, bilateral) of a condition is unable to be documented and reported.

The following pages contain the list of unspecified ICD-10-CM diagnosis codes for which there is a more specific code to identify laterality (right, left, bilateral) within that code family.
